

IN THE SPECIFICATION

At page 1, line 5, please insert the following paragraph:

This application is a divisional application of US Application 10/139,261, now allowed, which is a continuation of US Patent No. 6,437,373, which is a 371 of PCT/JP99/02377 filed on May 7, 1999.

After page 20 of the specification, please add a new page with the following Abstract:

ABSTRACT

The present invention provides an organic electroluminescence element which includes an anode and a cathode which are opposite to each other, and a hole injection layer and a luminous layer which are interposed between said anode and cathode, wherein the hole injection layer includes an oligomer having a phenylenediamine structure and a glass transition temperature of 110 °C or more, and wherein an intermediate layer for inhibiting a reaction in an interface between the hole injection layer and the anode is formed of phthalocyanine-based compound between the hole injection layer and the anode.
